

OUTDOOR HD CAMERA USER MANUAL

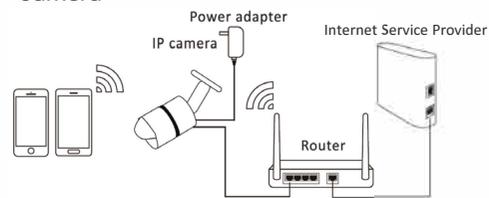

*Please read the user manual carefully before operation.
The guide pictures are for reference only.

Please make sure the camera is in within reach of your gateway and Wifi-network. Connect your mobile phone to a 2.4G network before setting up the camera. (5G is not supported by the camera) If you are using a dual band router, make sure your 2.4G Wifi is enabled and discoverable.

You can relocate the camera after you have finished the setup. Just unplug the power cable and relocate to desired location and connect power to boot and connect the camera. The camera will automatically connect to the WiFi after successful configuration.

POWER UP

1. Connect the power adapter to your camera and wall socket
2. Connect Ethernet cable to your router and camera

CONFIGURE YOUR CAMERA USING CABLE

1. Open Wattle and navigate to the device list: Open .../More --> manage devices -->
2. The camera will be discovered by Wattle automatically when connected to your network & authenticated with standard user and password which later can be changed from device settings.

You will now see your camera as "NOT CONFIGURED" status. That means camera is not yet placed in any room.

3. Click Configure
 - a. Assign a room to the camera
 - b. Settings for Camera usage can be "Record" or "Generic"

"Record" cameras will start recording in a case of an event

If record usage is selected, select also

"USAGE OPTION" - meaning which event will trigger recording.

There are 2 possible usage options:
on motion or
on motion when away alarm is armed.
Press "OK".

"Generic" cameras can be used for streaming and normal recording, but will not start automatically recording in case of an event. . Press "OK".

4. Press "Apply" to save camera configuration

Your camera will now be added to room you assigned (e.g. "GARAGE") and will have "AUTHENTICATED" status in the device list.

CONNECT YOUR CAMERA TO YOUR WIFI-NETWORK

*If camera is already set up using cable, reset the camera to proceed with WiFi setup

1. Open .../More --> manage devices --> add manually -> camera
2. Specify WiFi name and password. (case -sensitive)
3. Generate QR code.
4. Press reset button on a camera for 5 seconds, until green LED stops blinking.
5. Present mobile phone with QR code in front of camera. (use max brightness)
6. Wait until camera read QR code. when camera is connected to WiFi. LED will go solid green.

7. Return to .../More --> manage devices

8. The camera will appear automatically in the device list when connected to your network. You will now see your camera as "NOT CONFIGURED" that means that camera is not yet placed in any room.

9. Click Configure

- Assign a room to the camera
- Settings for Camera usage can be "Record" or "Generic"

"Record" cameras will start recording in a case of an event

If record usage is selected, select also "USAGE OPTION" - meaning which event will trigger recording.

There are 2 possible usage options:

- on motion or
- on motion when away alarm is armed.

Press "OK".

"Generic" cameras can be used for streaming and normal recording, but will not start automatically recording in case of an event. Press "OK".

10. Press "Apply" to save camera configuration.

Your camera will now be added to room you assigned (e.g. "GARAGE") and will have "AUTHENTICATED" status in the device list.

HOW TO USE AND OPERATE CAMERA

After completing the configuration of the camera you can open the room from the dashboard to see live stream and recordings from the camera. You will find the cameras under security tab in each room with cameras. You can now do on-demand recording and download recordings from the cloud storage to your phone.
